

# The Castle<sup>®</sup> COOLING SYSTEM Flush Service

**Did you know** that cooling system related problems account for 45% of all engine failures? Over a period of time the protection provided by your coolant decreases. Scale, rust and sludge build up in your radiator decreasing the effectiveness of your cooling system.

**Cooling system rust and corrosion can not only be removed but *prevented* as well.**

A safe, effective cleaning formula is added to the old coolant to remove tough organic deposits in the cooling system. Compatible with all types of coolant.

A specially formulated conditioner containing a balanced combination of inhibitors is added to the fresh coolant. This prevents corrosion and coolant breakdown. A cooling system sealer composed of refined organic fibers is added to prevent seepage and seal leaks in the radiator and block.

## Protect your Investment!

Our cooling system products contain all the necessary ingredients to extend the life of your vehicle's cooling system. Prevent premature failure of components by servicing your cooling system regularly.
