

The Castle® ULTIMATE TUNE-UP Service™

The components of your fuel system become dirty over time due to poor gasoline quality, long periods of idle and miles of driving. This build-up causes loss of performance as well as high levels of harmful emissions.

STEP 1

BEFORE **AFTER**

The fuel supply is treated first with Castle® Fireball Plus™ to restore optimum flow of gasoline through the fuel injectors to the rest of the fuel system.

STEP 2

BEFORE **AFTER**

The air intake system is cleaned using Castle® Cleans-Rite™, removing harmful deposits from the throttle body and air intake manifold. Restores smooth idle.

STEP 3

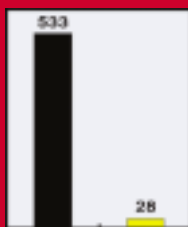

BEFORE **AFTER**

Finally, Castle® Vac-U-Power™ is used to safely clean away build-up from the combustion chambers, restoring optimum compression and efficiency.

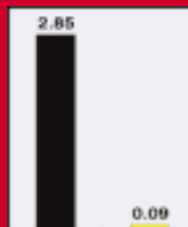

Our System Works!

Castle® Ultimate Tune-Up™ Test Data Reduction in Harmful Gas Emissions
