

F.D.A. APPROVED

FOAMING SANITIZER

Kills 99.999% of Germs new fresh lemon scent!

Professional Formula

Castle® Waterless Foaming Hand Sanitizer is based on the active ingredient benzalkonium chloride, which kills 99.99% of common germs that may cause illness, including MRSA and E. Coli. It **CONTAINS NO ALCOHOL** so it won't dry quickly, which is the key to effective sanitization. It delivers 2-4 hours of protection while moisturizing and conditioning. Leave on hands for 15-25 seconds and allow to air dry.

Part Numbers:

- 8.5 OZ (#C64250) 12/CASE
- 16 OZ (#64016) 12/CASE
- 17 OZ (#C6417) 6/CASE
- 1 GAL (#C64128) 4/CASE

Perfect For:

- PUBLIC SPACES
- WAITING AREAS
- BATHROOMS
- AUTO REPAIR SHOPS
- SCHOOLS
- BUS GARAGES

*First discovered in 1935 by Gerhard Domagk, a Nobel laureate from Germany, Benzalkonium Chloride (BZK) was soon heralded as an effective disinfectant and antiseptic; within twelve years, the first product manufactured with it was registered in the United States.

In a preliminary risk assessment issued in 2006, the Office of Pesticide Programs at the Environmental Protection Agency's (EPA) Antimicrobials Division cleared the compound for additional registrations, noting that "products containing BZK can be used as general cleaners, disinfectants, and deodorizers in the home." By mid-2006, EPA published final conclusions that endorsed the preliminary findings.

In 2019, the Food and Drug Administration (FDA) green-lighted the over-the-counter sale of BZK-manufactured hand hygiene products.
